

# **Fire-extinguishing Systems for Deep-fat Cooking Equipment**

## **Amended Guidance**

Guidance for the Survey and Construction of Steel Ships Part R

## **Reason for Amendment**

SOLAS II-2/10.6.4 requires fire-extinguishing systems of deep-fat cooking equipment to be tested in accordance with ISO15371:2000- an international standard recognized by the IMO.

Since the aforementioned ISO standard was recently revised, the IMO, at the 90th Session of the IMO Maritime Safety Committee (MSC90) held in May 2012, amended the footnote for SOLAS II-2/10.6.4 so that it now references the most recent version of ISO15371:2009. This amended footnote was approved and circulated as MSC.1/Circ.1433.

Therefore, relevant requirements were amended in accordance with MSC.1/Circ.1433.

## **Outline of Amendment**

Amended requirements related to fire-extinguishing systems of deep-fat cooking equipment to specify that such systems are to be in accordance with the most recent version of the relevant ISO standard referenced by SOLAS.
